Re: 10/659684

Hi,

Please search SEQ ID NO: 2 ansd 115 of 10/659684 in the commercial database.

Thanks.

Seyon.

J. Seharaseyon Remsen 4C61, Box 4C70.

```

The present sequence represents a human zalphall ligand polypeptide, which is a cytokine. The zalphall ligand is useful for stimulating the proliferation and development of heaptopietic cells in vitro and in vivo. Zalphall ligand polymucleotides can be used as primers or probes for cloning the zalphall gene. The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated soluble zalphall cytokine receptor cc polypeptide and their cDNA molecules. Zalpha proteins are useful for cc inhibiting or antagonising the ligand activity-induced proliferation of cc haematopoietic cells and haematopoietic cell progenitors preferably cc lymphoid cells which are natural killer cells or cytotoxic T cells. Cc Zalpha is useful for treating immune and inflammatory disorders, for creducing proliferation of neoplastic B or T cells, for suppressing an cc immune response in a mammal exposed to an antigen or pathogen. Zalpha is cuseful for treating diseases that require immune regulation including caucoimmune diseases such as rheumatoid arthritis, multiple sclerosis, cmyasthenia gravis, systemic lupus erythematosus (SLE) and diabetes; cc asthma, ulcerative colitis, inflammatory bowel disease, Crohn's disease, cspsis, viral infection (dengue virus infection) and cancer. The present cytokine receptor ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of a novel cytokine, CC zalphall Ligand and the polynucleotide encoding it. The invention also CC gives the sequence for the zalphall receptor and the polynucleotide CC encoding it. The zalphall Ligand polypeptide stimulates proliferation of CC natural killer (NK) cells or NK cell progenitors, the activation of NK CC cells, proliferation of T-cells, proliferation of B-cells stimulated with CC cells, proliferation of B-cells stimulated with anti-CD40 antibodies, stimulates an antigenic response in a mammal, and CC reduces proliferation of B-cells stimulated with anti-IgM antibodies. The CC zalphall Ligand polypeptide is also useful in preparing antibodies that CC bind to zalphall Ligand epitopes. The zalphall Ligand polynucleotides can be used as probes or primers to clone regions of a zalphall Ligand gene, CC and in gene therapy. Zalphall Ligand may also be used to identify CC inhibitors of its activity, to enhance the generation of anti-tumour CC responses with or without the infusion of donor lymphocytes, and to CC activate or stimulate the immune system. The present sequence represents human zalphall Ligand polypeptide. The cDNA encoding this is isolated CC from a cDNA library from activated human peripheral blood cells (hPBCS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
The invention relates to polynucleotides and polypeptides of interleukin-
21 (IL-21) antagonists, that bind with specificity and exhibit an EC50
that is not detectable in receptor binding studies. The antagonists of
the invention have mutations in the D helix of the IL-21 molecule, and
can be used to inhibit the activity of IL-21 with its cognate receptor.
                                                                                                                                                                                                                         New IL-21 polypeptide and encoding polynucleotide, useful for diagnosing and treating disorders with aberrant expression or activity of the IL-21 polypeptide, such as cancer, rheumatoid arthritis, multiple sclerosis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The II-21 antagonists are useful for diagnosing and treating disorders involving the abbrrant expression or activity of the II-21 polypeptide, such as cancer, inflammatory and autoimmune disorders, including rheumatoid arthritis, multiple sclerosis, systemic lupus erythematosus, myasthenia, gravis and diabetes. The polypeptides can also be used to prepare antibodies that bind II-21 epitopes, peptides or polypeptides, and for enhancing in vivo killing of target tissues. The present sequence is human II-21 (originally designated zalphall ligand)
                      New fusion polypeptide for regulating hematopoiesis and immune responses, comprises a fragment of a MU-1 polypeptide and a non-MU-1 fusion polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; MU-1; haematopoietin receptor superfamily chain; immunom cytostatic; antibacterial; virucide; antianaemic; gene therapy; haematopoiesis; anaemias; immune response; cancer; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human interleukin 21 (IL-21).

The polypeptide is useful in regulating haematopoiesis (e.g. in cases of anaemias) and/or immune responses (e.g. immune response to cancer, infections or to a transplanted organ) and in identifying other members of the haematopoietin superfamily, including cytokines and receptors. The polynucleotide may be used to express recombinant protein for analysis, characterisation or therapeutic use; and as markers for tissues or chromosomes. The polypeptide and polynucleotide may also be used as nutritional sources or supplements. This is the amino acid sequence of human interleukin 21 (IL21), a cytokine receptor that can be used to characterise the novel haematopoietin receptor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; interleukin-21; immunosuppressive; antirheumatic; antiarthritic; antiinflammatory; dermatological; ophthalmological; uropathic; muscular-gen; vasotropic; antidiabetic; antithyroid; thyromimetic; neuroprotective; gastrointestinal-gen; antipsoriatic; gene therapy.
                                                                                                                        New substantially pure interleukin-21 polypeptide, useful for diagnosing treating and prognosticating autoimmune disorders, e.g. rheumatic disease, type I diabetes, Graves disease, multiple sclerosis, psoriasis and myasthenia gravis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human interleukin-21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADE85808 standard; protein; 162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 10; 26pp; English

CC include mutants of murine IL-21 in which the Gln residue at position 119
CC residues at positions 114 and 119 of the mature polypeptide are both
CC replaced by Asp. The mutant IL-21 golypeptides inhibit or suppress T-cell
CC activation. They preferably comprise a sequence that increases
CC circulating half-life, such as the Fc region of an IgG molecule and may
CC further comprise an antigenic tag. Such antagonists inhibit cellular
CC proliferation in response to either anti-CD3 monoclonal antibodies or
CC anti-CD3 antibodies applied together with IL-2 and/or IL-15 together with
CC IL-21. A claimed method of suppressing the immune response in a patient
CC comprises administering the IL-21 antagonist or a nucleic acid encoding
CC it. The method is used to treat an autoimmune disease such as rheumatic
CC disease, including systemic lupus erythematosus, Sjogren's syndrome,
CC scleroderma, mixed connective tissue disease, dermatomyositis,
CC polymyositis, Reiter's syndrome, or Behcet's disease, or rheumatoid
CC arthritis, type I disabetes, autoimmune disease of the thyroid such as
CC Hashimoto's thyroiditis or Graves' disease, an autoimmune disease of the chyroid such as
CC encephalomyelitis, or an autoimmune disease selected from pemphigus
CC vulgaris, pemphigus vegetans, pemphigus foliaceus, Senear-Usher syndrome,
CC Batazilian pemphigus, psoriasis or inflammatory bowel disease (all

                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel albumin fusion protein having albumin CC or biological activity. Human serum albumin is responsible for a CC significant proportion of the osmotic pressure of serum and also CC functions as a carrier of endogenous and exogenous ligands. The fusion of CC the therapeutic protein may increase shelf-life and stability of CC albumin to a therapeutic protein may increase shelf-life and stability of CC allow production of compositions with antidiabetic activity whilst the CC nucleotide sequence which encodes it may be useful for gene therapy. The CC albumin fusion protein is useful for preparing a composition for treating CC diabetes mellitus. The present sequence is that of a therapeutic protein CC which was fused with human albumin to create a novel albumin fusion CC protein of the invention. Note: The sequence data for this patent did not CC form part of the printed specification, but was obtained in electronic CC format directly from WIPO at ftp.wipo.int/pub/publishedpct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tumour;
```

CC The invention relates to stimulating an immune response in a mammal cexposed to an antigen or pathogen comprises administering a composition comprising mature zalphall ligand polypeptide comprising residues 32-162 cc fADH44572 in a pharmaceutical vehicle. Also included are stimulating an immune response in a mammal exposed to an antigen or pathogen (comprising: (a) determining (in) directly the level of antigen or pathogen (comprising the lateral polypeptide in a pharmaceutical vehicle; (c) determining (in) directly the level of antigen or pathogen in the mammal; (b) administering a composition comprising in the antigen or pathogen in the mammal; (c) and (d) comparing the antigen or pathogen level in (a) with (b), where a composition of immune response in a mammal exposed to an antigen or pathogen (comprising: (a) determining a level of antigen- or pathogen- comprising: (a) determining a level of antigen- or pathogen- general polypeptide in a pharmaceutical vehicle; (c) determining a post (d) comparing the level of the antigen- or pathogen- specific antibody; (d) administering a composition comprising ralphall composition the antibody level indicates stimulation of immune response). The method is useful for stimulating an immune response in a mammal composed to an antigen or pathogen, and for enhancing anti-tumour activity resulting in a reduction in tumour progression, decrease in metastasis, or all cell tumour. The zalphall ligand is useful for treating a wide range of diseases arising from defects in the immune system, e.g. crasse of diseases arising from defects in the immune system, e.g. crasses of the present sequence is a human Zalphall ligand in improving communication. The present sequence is a human Zalphall ligand protein.

Sequence 162 AA;

                                                                                                                                                                                                                                                                              The invention relates to a novel isolated zalphall ligand polypeptide. The polypeptide of the invention may be useful for boosting immunity to infectious diseases and treating immunocompromised patients, such as HIV patients, as well as in improving vaccines. The current sequence is that of the human zalphall ligand protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                      New zalphall ligand polypeptides, useful for boosting immunity to infectious diseases, and treating immunocompromised patients, such as human immunodeficiency virus (HIV) patients, or in improving vaccines.

                                                                                                       The invention relates to treating Non-Hodgkin's lymphoma, cancer or CC infection and involves administering to the subject a polypeptide having CC a functional activity of interleukin-21 (IL-21). The methods are useful CC epithelial carcinoma, breast cancer, prostate cancer, ovarian cancer and CC epithelial carcinoma, breast cancer, prostate cancer, ovarian cancer and CC colon cancer; viral infection such as AIDS, Hepatitis B or C virus, CC gastroenteritis, haemorrhagic diseases, anteritis, carditis, carcer and CC encephalitis, paralysis, brochholitis, upper or lower respiratory CC disease, respiratory papillomatosis; arthritis, disseminated disease, CC meningitis, and mononucleosis; or bacterial infection, such as an CC infection by a bacterial selected from chlamydiae, listeriae, helicobacter CC pylori, mycobacterium, mycoplasma, salmonella, and shigella, or sudden CC viruses, Epstein-Barr virus, Cytomegalovirus, Pox viruses, Papilloma CC viruses, Epstein-Barr virus, Ortomegalovirus, Pox viruses, Papilloma CC viruses, Adenovirus, Poliovirus, Ortomegalovirus, Pox viruses, Papilloma CC viruses, Adenovirus, Poliovirus, Ortomegalovirus, Pox viruses, Papilloma Viruses, caliciviruses, rables viruses, and rinderpest viruses. CC The present sequence represents a human IL-21 polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                           The present invention describes a method for inhibiting interferon gamma (IFNgamma) levels in a T cell population by contacting the T cell or cell coppulation with an interleukin 21 (II-21) agonist in an amount sufficient to inhibit IFNgamma in the T cell or cell population, wherein the agonist is an II-21 polypeptide comprising an amino acid sequence at least 85% identical to the 162 amino acids (SEQ ID NO: 2, ADJ25621), and which is capable of binding to an II-21R. An II-21 agonist has antiasthmatic, antiallergic, antiarthritic, antirheumatic, neuroprotective, antiinflammatory, dermatological, immunosuppressive, muscular and cantingsoriatic activities. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of II-21, T helper 1 (Thl) and/or Th2, such as asthma, allergy, rheumatoid arthritis, multiple sclerosis, lupus, diabetes, Crohn's disease, peoriasis and myasthenia gravis. The present sequence represents human II composition of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IL-21 agonist; antiasthmatic; antiallergic; antiarthritic; antirheumatic; neuroprotective; antiinflammatory; dermatological; immunosuppressive; muscular; antiporiatic; Thelper; Thi, Th2; asthma; allergy; rheumatoid arthritis; multiple sclerosis; lupus; diabetes; Crohn's disease; psoriasis; myasthenia crewin.
                                                                                                                                                                                                                                                                                                                                                                Inhibiting interferon gamma (IFNgamma) levels and T helper cell development and function in a T cell or cell population using II-21 modulators, useful for the preventing and/or treating asthma, allergy, arthritis, lupus and diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                 The invention relates to an interleukin (IL)-21 that is used for the treatment of diseases or conditions where eosinophils are involved in a protective response in a subject, e.g. allergic conditions and/or parasitic diseases. Methods of the invention are useful for the treatment of diseases or conditions where eosinophils are involved in a protective response in a subject, such as allergic conditions (e.g. asthma, allergic rhinitis or allergic diseases of the skin) and/or parasitic diseases, aspecially helminthic infection. The current sequence represents the DNA sequence encoding IL-21. Note: This sequence is not encoded by that of ADM41016, which we are told in the specification is the IL-21 encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-OCT-2002; 2

                                                                                                                                                                     The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or vital, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

The invention describes an isolated polypeptide comprising a sequence of CC amino acid residues that is at least 90 or 95% identical to residues 41 CC (Gln) to 148 (Ile), or 32 (Gln) to 148 (Ile) of a sequence of 162 amino CC acids (SEQ ID NO:2, human zalphall ligand), fully defined in the CC specification. Also described are: a pharmaceutical composition CC comprising the polypeptide, and a vehicle; a method of treating cancer in CC a mammal; a method of stimulating an immune response in a mammal with CC at the cancer in a mammal and the composition comparising a method of stimulating an immune response in a mammal bearing CC attnour; an isolated polynucleotide comprising a sequence of nucleotides that encode amino acid residues cited above, where the polynucleotide (CC encodes a polypeptide that binds a receptor comprising 538 amino acids, CC fully defined in the specification; a pharmaceutically acceptable composition the polynucleotide encoding, in a pharmaceutically acceptable composition at a control element, and a DNA segment comprising the following operably linked compositions and an isolated polynucleotide molecule comprising at least 10 nucleotides of the polynucleotide sequence of 642 bp, fully defined in the specification. The molecules, compositions and methods are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09-MAR-1999;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ureidoglycolate hydrolase (EC 3.5.3.19) - yeast (Saccharomyces cerevisiae)

N;Alternate names: protein YIR032c
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Pate: 31-Mar-1992 #sequence_revision 14-Sep-1994 #text_change 05-Oct-2004
C;Accession: S42022; S48494
R;Yoo, H.S.; Cooper, T.G.
Yeast 7, 693-698, 1991
A;Fitle: The ureidoglycollate hydrolase (DAL3) gene in Saccharomyces cerevisiae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: Cytokine with immunoregulatory activity. May promote the transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells (By similarity). May play a role in proliferation and maturation of natural killer (NK) cells in synergy with IL15. May regulate proliferation of mature B- and T-cells in response to activating stimuli. In synergy with IL15 and IL18 stimulates interferon gamma production in T-cells and NK cells. During T-cell mediated immune response may inhibit dendricic cells (DC) activation and maturation.
                                                                                                                                                                                                                                                                                                                                                                                            GO:0042102; P:positiv

Immunol. Immunopathol. 95:73-80(2003).

FUNCTION: Cytokine with immunoregulatory activity. May promote transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells. May play a role in proliferation and maturation of natural killer (NK) cells in synergy with IL15. May regulate proliferation of mature B- and cells in response to activating stimuli. In synergy with IL15 title stimulates interferon gamma production in T-cells and NK cells (By similarity). During T-cell mediated immune response inhibit dendritic cells (DC) activation and maturation (By

SIMILARITY: Belongs to the IL-21 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells. May play a role in proliferation and maturation of natural killer (NK) cells in synergy with IL15. May regulate proliferation of mature B- and T-cells in response to activating stimuli. In synergy with IL15 and IL18 stimulates interferon gamma production in T-cells and NK cells (By similarity). During T-cell mediated immune response may inhibit dendritic cells (DC) activation and maturation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           _PIG

                                                                                                                                                                                                                                                                                                                                                FUNCTION: Cytokine with immunoregulatory activity. May promote transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells. May play a role in proliferation and maturation of natural killer (NK) cells in synergy with ILIS. May regulate proliferation of mature B- and cells in response to activating stimuli. In synergy with ILIS timulates interferon gamma production in T-cells and NK cells (By similarity). During T-cell mediated immune response inhibit dendritic cells (DC) activation and maturation. SUBCELLULAR LOCATION: Secreted protein.

SUBCELLULAR LOCATION: Secreted protein (By similarity)
SIMILARITY: Belongs to the IL-21 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Cytokine with immunoregulatory activity. May promote the transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells. May play a role in proliferation and maturation of natural killer (NK) cells in synergy with IL15. May regulate proliferation of mature B- and T-cells in response to activating stimuli. In synergy with IL15 and IL18 stimulates interferon gamma production in T-cells and NK cells (By similarity). During T-cell mediated immune response may inhibit dendritic cells (DC) activation and maturation (By
